Docebo

The open source e-learning suite that fit organization needs
Agenda

- What is e-learning
- Learning object related to the market we are analyzing
- How the e-learning platform works
- Final discussion
What is an LMS

- LMS is a system that categorize online courses, store learning object, track students activity and do aggregate report.

- Every user connected to the Internet (or Intranet) can enter inside the E-Learning platform and attend online courses watching online lessons.
Why docebo is released under Open Source license?

- Open Source means that the customer don’t have license fees to pay every year and no one will verify how many users you will subscribe to the e-learning platform.

- Open source means also that you will own the e-learning software, this is not a rent approach, the installation will be yours forever.
Didactical models

- Self learning
- Driven learning
- Collaborative learning
- Knowledge learning

Docebo is not a “one way product”, the system support all the didactical model

Every course can have his own didactical model, “Flexibility per course” is more flexible than “Flexibility per context”
What a student can do with an e-learning platform

- Watch course catalogue
- Watch lessons
- Attempt test
- Cooperate with other students
- ...

e-learning
What a teacher (or system administrator) can do with an e-learning platform

- Monitor students activity and results
- Create lessons sequences
- Perform tutoring activity
- Interact with other students
- ...

e-learning
docebo.com
The Open Source Company
LMS functions
