Overview of OntoFrame-K®

Goals

Goals

- Provide a infrastructure for science and technology information using ontology
- Make a <u>valuable knowledge</u> from research results
- Treat a mass knowledge information
- Develop <u>useful scenarios and interfaces</u> for <u>researchers</u> to effective use

Approaches

- Manage <u>resources based on URI</u>
- Expand knowledge using <u>knowledge expansion rules</u>
- Convert knowledge to <u>RDF triples</u> and manage RDF triples using <u>DBMS</u>
- Convert <u>SPARQL query</u> to SQL query

Science and Technology Ontology

Ontology

 Core class: Person, Organization, Project, Outcomes (Paper, Patent, Report), Publication (Journal, Proceedings), Topic, CreatorsInformation, Location

Knowledge management 1/2

- 6 -

Lab

Knowledge expansion

- Using 22 expansion rules
- Ontology schema rules and user defined rules
 - x hasCreationInformation y, y hasCreator z -> x createdByPerson z
 - x hasInstitutionOfPerson y, y hasLocationOfInstitution z
 -> x locatedIn z
 - □ x createdByPerson y -> y creatorOf x
- RDF triples: 1.6 million
- Manage RDF triples using DBMS
 - To handle a mass of RDF triples

Query Processing

User interfaces 3/5

Researcher Networks

- Group the researchers that took part in research results together
- Display the groups with the number of researchers
- Display Expert list, coauthor network and citation network

- Display the connection and degree of connectivity between researchers
- Limit the number of researcher to 7 and click 'more' to select other researcher
- The thickness of line represents degree of connectivity between two researchers

User interfaces 4/5

Researcher Information

□ 결과내검색 목록보기			검색 목록보기
변호	이름	소속기관	소속부서
7	김원식 PER_0000002165	고려대학교	교육학

- Search institution
- Display the information of institutions
- Suggest top 3 subjects and categories per institution

Search researcher

- Display the information of researchers
- Suggest top 3 subjects and categories per researcher

Institution Information

User interfaces 5/5

Research map

- Separated by two level map
- Display the research results by location
- The depth of color represents the main area that generated research results

Statistics Information

- Display the statistics of researcher' works by year
- Limit the number of researcher to 3
- Select one of 3 types of chart
- every points represent the number of research results

Conclusions

Conclusions

- Provide a infrastructure for science and technology information using ontology
- Provide easier, more effective services
- Generate knowledge from a different standpoint

Future works

- Enhance the accuracy and speed on performance
- Create more robust, more effective services
- Apply to foreign languages
- Cover a mass of research results
