## Nanomaterials as Chemicals

*Daniel BERNARD*

*Comité National de la Chimie*

2

*What is called Nanomaterials ?*

*Do we need different definitions  
for Nanomaterials ?*

## Nanotechnologies

➤ include, for ISO TC 229, either or both of the following:

1. **Understanding and control of matter and processes at the nanoscale, typically, but not exclusively, below 100 nanometres in one or more dimensions where the onset of size-dependent phenomena usually enables novel applications,**
2. **Utilizing the properties of nanoscale materials that differ from the properties of individual atoms, molecules, and bulk matter, to create improved materials, devices, and systems that exploit these new properties.**

## Materials structured at the nanoscale

- **Nanomaterial**  
Material with any external dimension in the nanoscale, or having internal structure, or surface structure in the nanoscale,
- **Nano-object**  
Material with one, two or three external dimensions in the nanoscale,
- **Nanostructured material**,  
Material having internal nanostructure or surface nanostructure,
- **Manufactured nanomaterial**,  
Nanomaterial intentionally produced for commercial purpose to have specific properties or specific composition,

ICSU-CODATA; 23-24 february 2012 –D.Bernard

## Nanoscale

**size range from approximately 1 nm to 100 nm**

1/ *Properties that are not extrapolations from a larger size will typically, but not exclusively, be exhibited in this size range. For such properties the size limits are considered approximate.*

2/ *The lower limit in this definition (approximately 1 nm) is introduced to avoid single and small groups of atoms from being designated as nano-objects or elements of nanostructures, which might be implied by the absence of a lower limit.*

ICSU-CODATA; 23-24 february 2012 –D.Bernard

## Polymeric structuration at the nanoscale using block copolymers

- Anionic polymerization of methacrylates : SBM copolymers (Poly Styrene-*b*-Polybutadiene-*b*-PMMA)

- Nitroxide mediated radical polymerization
  - Functional acrylic and methacrylic block copolymers

Nanostructured phases obtained with block copolymers

ICSU-CODATA; 23-24 february 2012 –D.Bernard

## Micro and ultra filtration membrane for water purification

ICSU-CODATA; 23-24 february 2012 –D.Bernard

## Coatings and surface treatment

### Glass coating

### Paints Self cleaning surfaces

### Anti scratch coating

### Technical Textiles Membranes

## Nanocomposites for aerospace industry

### Multifunctional nanocomposites

- Lightened aerostructure,
- Conductive nanocomposites,
- Active materials (probe, actuators, .),

## Carbon Dioxide Capture and Utilization

- Current CO<sub>2</sub> capture media only perform a single function, i.e. CO<sub>2</sub> separation from flue gases. Need to develop:
  - Media and membranes with multifunctional and size/shape selective nanocages that can capture CO<sub>2</sub> from flue gases and convert it to useable products.

Yaghiet al. Science (2010)327, 846

Can CO<sub>2</sub> be then utilized to make fuel (methane) or precursors for chemicals and polymers.

ICSU-CODATA; 23-24 february 2012 -D.Bernard

21

## Alternative energies

ICSU-CODATA; 23-24 february 2012 -D.Bernard

# Energy: electrochemical storage

Supercapacitors  
Lithium-ions batteries

Power to weight (W/kg)

Capacitors  
F- $\mu$ F  
 $\mu$ s-ms

Super-capacitors  
F-kF  
ms-s

Batteries  
sAh / min

Energy to weight (Wh/kg)

ICSU-CODATA; 23-24 february 2012 –D.Bernard

# Enhanced imaging using fluorescently labelled nanoparticles

## Silica Coated Iron Oxide Nanoparticles

Based on earlier work that makes a dye-doped silica particle around a core of a superparamagnetic iron oxide particle (~9 nm diameter).

*Bumbet al. Nanotechnology 19, 335601 (2008)*

ICSU-CODATA; 23-24 february 2012 –D.Bernard

## Nanomaterials in the past

**“LYCURGUS**

**Cup”**

**(Rome 400 AD)**

Dichroic Glass

- 40 ppm Au and  
300 ppm Ag
- Nanoparticles  
diameter 70 nm

**(British Museum)**

ICSU-CODATA; 23-24 february 2012 –D.Bernard

25

## Nanomaterials in the past

**Carbon nanotubes in Damascus steel**  
**Peter Paufler and al. (Dresde University)**  
**Nature 16.11. 2006**

**Damascus cutlass, made by the persian master smith  
Assad Allah ( XVIth century),  
exposed at the historical museum Berne**

[Steel produced in India and imported under the name of wootz – containing with iron, 1,2 % à 1,8 % de C, and some traces of Si, Mn, P and S]

ICSU-CODATA; 23-24 february 2012 –D.Bernard

26

## Nanomaterials uncertainties

- Nanomaterial definition ?
- Nanomaterial detection/characterization ?
- Specific regulation for nanomaterials («nano-REACH», US EPA PMN, notification, labelling,..) v.s. chemical substances ?
- « Specific nanomaterial » risks:
  - Technical and market,
  - Health and environment impacts,
  - Legal / liability, insurance, financial,
  - Ethical, *societal acceptance*,
- « Specific nanomaterial » benefits,
  - Sustainable development (less energy, less raw materials),
  - Efficiency / Performance, new functions,

27

ICSU-CODATA; 23-24 february 2012 –D.Bernard

## Nano-objects hazard

Nanoscale particles  
end up in the brain.

Conventional particles  
end up in the lungs.

Based on Oberdörster, G., et al., *Inhal. Toxicol.* 16 (6-7), 437-445, 2004.

28

ICSU-CODATA; 23-24 february 2012 –D.Bernard

## Conclusions

**Societal perception and impacts of nanomaterials is difficult to predict. Early societal intervention may enable anticipation of positive and negative impacts.**

**In spite of uncertainties, nanomaterials are an opportunity for the Society and the citizens. All the stakeholders must collaborate to support a safe and responsible production and uses of nanomaterials for the benefit of all the citizens.**

ICSU-CODATA; 23-24 february 2012 –D.Bernard
